# Student Application Platform Project Proposal

**Prepared by:** Minenhle Njabulo Trinity Dlamini

**Project Overview**
The Student Application Platform is a web and mobile solution designed to simplify the university application process in South Africa. Students create a profile, store academic results, receive course recommendations based on their grades, discover suitable institutions, and submit applications more confidently.

**Problem**
Many learners struggle to identify suitable programmes and institutions and often find the application process confusing and fragmented.

**Solution**
A centralized platform that helps students manage their information, receive intelligent recommendations, and prepare applications from one place.

**Key Features**
• Student profiles
• Secure academic record storage
• Course recommendation engine
• Institution suggestion system
• Application management
• Admin dashboard
• Web and mobile versions

**Benefits**
Improves access to higher education, reduces confusion during applications, and supports informed decision-making for prospective students.

**Vision**
To work with South African higher education stakeholders to make university applications simpler, smarter, and more accessible for every learner.
